"Deploying An Application on Paas"

Abstract :- cloud computing is expected to become the driving force of information technology to revolutionize the future. However it is expected to offer much more as it is composed with its components Saas and Iaas.

* Our project is aimed to access and analyze the Paas technology on cloud. The Year 2015 is named as "the year of Paas".

* Platform as a service (Paas) is a type of cloud computing offering in which a service provider delivers a platform to clients, enabling them to develop, run and Manage business applications without the need of the build and maintain service.

* We are going to deploy an application on Paas technology using the present things like AWS, GCP or Azure.

* The application may be like a voting application where we will focuses on our code and rest of the things is managed by the cloud service providers using Paas.
